

CognitiveEMS + VayuRays — Marketing Brochure Reference Document

Marketing Reference — Generated 09 July 2026

Purpose of this document: This is the master reference for the design/marketing team to produce a print or digital brochure covering both products. It contains positioning, taglines, feature-by-feature marketing copy, and the approved screenshot assets. **No technical/implementation detail is included** — everything below is written for a business, facilities-management, and energy-procurement audience.

Image note: Screenshots are placed under the feature section they most likely represent, based on the product's known screen flow. Please have the design team do a final visual pass to confirm each image is captioned against the correct feature before publishing, and reorder if needed.

Better Together: One Connected Energy Stack.....	13

Combined Solution — Elevator Pitch

From raw meter pulse to boardroom decision — in one connected platform.

VayuRays quietly and reliably collects every reading from your building and plant equipment. CognitiveEMS turns that data into foresight — predicting demand, choosing the cheapest and cleanest energy source in real time, and keeping you compliant with grid regulations. Together, they give industrial and commercial energy teams a single, trustworthy pipeline from **sensor to savings**.

Part 1 — CognitiveEMS

Tagline Options

- *"Energy intelligence for the industrial enterprise."*
- *"See tomorrow's power needs. Save on today's power bill."*
- *"One dashboard. Every energy source. Zero guesswork."*

Positioning Statement

CognitiveEMS is an AI-driven energy management platform built for industrial plants and commercial facilities that draw power from multiple sources — solar, wind, battery storage, grid, and open-access power markets. It replaces manual spreadsheets, delayed reporting, and reactive decision-making with **live visibility, predictive intelligence, and automated optimization**.

Target Audience

- Plant/Facility Energy Managers
 - Industrial procurement & sustainability teams
 - DISCOM / Open-Access energy consumers
 - CFOs and Ops leaders tracking energy spend as a controllable cost
-

Feature 1 — Predictive Load & Renewable Forecasting

See electricity demand and green-energy generation before it happens. CognitiveEMS forecasts consumption and solar/wind output in fine 15-minute increments, up to a full day ahead, complete with confidence ranges so planners know how much certainty to build into their decisions.

Key benefits

- Anticipate demand spikes before they hit the meter

- Plan renewable usage instead of reacting to it
- Reduce reliance on last-minute, high-cost grid power

Forecast dashboard — predicted load with upper/lower confidence bounds.

Feature 2 — Automated Source Optimization

At the heart of CognitiveEMS is an intelligent dispatch engine that continuously recommends the most cost-effective, sustainable mix of Solar, Wind, Battery, Grid, and Open-Access power — recalculated automatically as conditions change.

Key benefits

- Always dispatch the lowest-cost, cleanest available source
- Transparent, auditable recommendation for every time slot
- Battery charge/discharge guidance built in

Live source-mix recommendation and dispatch summary.

Feature 3 — Real-Time Cost & Savings Intelligence

Every optimization decision is measured against a "what it would have cost on grid power alone" baseline — so savings are never a guess, they're a number leadership can trust.

Key benefits

- Instant visibility into savings percentage and total ₹ saved
- Historical cost trend charts (7 / 30 / 90-day views)
- Clear actual-vs-baseline comparison for reporting and audits

Cost Analysis — total savings, savings %, and actual vs. baseline cost history.

Feature 4 — Live, Unified Operations Dashboard

A single real-time screen brings together cost per hour, savings versus grid, banked energy balance, active alerts, battery health, and the latest optimization summary — all updating live, no page refresh required.

Key benefits

- One glance replaces five spreadsheets
- Instant awareness of anything that needs attention
- Designed for control-room displays as well as desk use

Feature 5 — Energy Banking & Open-Access Reconciliation

For facilities that generate their own renewable power and bank surplus units with the grid, CognitiveEMS automatically tracks injected units, withdrawals, running balance, and expiries — removing the manual ledger work that normally falls on plant accountants.

Key benefits

- Always know your banked energy position
- Automatic reconciliation reduces manual errors
- Full transaction history on demand

Feature 6 — Time-of-Day Tariff Intelligence

Electricity pricing changes by the hour. CognitiveEMS keeps every applicable tariff slot, surcharge, and wheeling charge current, and includes a built-in comparison calculator so teams can evaluate cost scenarios before committing to a dispatch plan.

Key benefits

- Stay current on peak/off-peak/normal tariff structures
- Compare cost scenarios instantly
- Reduce exposure to surprise peak-hour charges

Feature 7 — SLDC Day-Ahead Scheduling & Compliance

For sites participating in open-access power, CognitiveEMS streamlines the mandatory day-ahead scheduling process with grid authorities and tracks how actual consumption deviated from the approved schedule — keeping compliance simple and defensible.

Key benefits

- Submit 24-hour schedules in a guided, structured form
- Automatic deviation tracking against approved units
- Reduces regulatory and penalty risk

Scheduling & compliance workflow (representative screen — confirm exact feature before final placement).

Feature 8 — Smart Alerts, Built for Action

Instead of digging through logs, operators get severity-ranked alerts the moment something needs attention, with one-click (or bulk) acknowledgment and toast notifications so nothing slips through.

Key benefits

- Prioritized by severity, not buried in noise
 - Fast acknowledge / acknowledge-all workflow
 - Keeps accountability visible across the team
-

Feature 9 — Effortless Data Onboarding

Bring in consumption, generation, and battery data however it already exists — drag-and-drop CSV/Excel upload, automatic file-drop ingestion, or direct API sync — with a visible import history and progress tracking for every file.

Key benefits

- No special file formatting gymnastics required
 - Full audit trail of every import
 - Works with existing metering and SCADA exports
-

Feature 10 — Meter Fleet & Historical Analytics

Manage the full meter inventory and drill into historical trends per meter with interactive charts — turning raw historical readings into an analysis-ready view for engineering and finance teams alike.

Key benefits

- Centralized meter inventory management
- Rich historical trend charts, exportable for reporting
- Supports root-cause and trend analysis

Meter history / analytics view (representative screen — confirm exact feature before final placement).

Feature 11 — Personalized "My Insights" View

Beyond the operations dashboard, individual stakeholders get a tailored insights view: where their power came from, consumption patterns over time, expected renewable generation, and banked energy status — making energy transparency accessible beyond the ops team.

Key benefits

- Extends energy visibility to non-technical stakeholders
- Builds internal sustainability accountability
- Simple, digestible visual storytelling of energy usage

Feature 12 — Integration & AI Health Visibility

CognitiveEMS surfaces the live health of every connected data provider and the status of its AI forecasting engine directly in the interface — so nobody has to wonder whether the "smart" in smart energy management is actually running.

Key benefits

- At-a-glance confidence in system health
- One-click AI model retraining trigger
- Clear separation between connectivity status and AI health

Feature 13 — Enterprise-Grade Access Control

Role-based access (Administrator, Operator, Viewer) ensures the right people can act, while everyone else retains visibility — supporting both operational agility and governance requirements.

Key benefits

- Segregation of duties for compliance-conscious organizations
 - Safe visibility for auditors and executives without operational risk
 - Secure, modern authentication throughout
-

Feature 14 — A Workspace Built for Every Shift

A polished, modern interface with full light and dark theme support means the same clarity and legibility whether it's a bright office or a dimmed 24/7 control room.

Key benefits

- Reduces eye strain during night-shift monitoring
 - Consistent, professional look across all conditions
 - Designed for long viewing sessions on control-room displays
-

CognitiveEMS — Business Outcomes Summary

Outcome	How CognitiveEMS Delivers
Lower energy cost	AI-optimized source dispatch + tariff intelligence
Reduced compliance risk	Automated SLDC scheduling & deviation tracking
Faster decisions	Real-time dashboard + predictive forecasting
Less manual effort	Automated banking reconciliation & data ingestion
Organization-wide accountability	Role-based access + personalized insights

Part 2 — VayuRays Data Acquisition System

Tagline Options

- *"Every reading, captured. Every device, watched."*
- *"The reliable foundation beneath smarter energy decisions."*

- *"Set it up once. Trust it forever."*

Positioning Statement

VayuRays is a dependable, always-on data acquisition system for Building Management and industrial control networks. It automatically finds equipment on the network, lets operators choose exactly what to monitor, and continuously and reliably captures readings — providing the clean, trustworthy data foundation that any energy analytics or optimization platform (including CognitiveEMS) depends on.

Target Audience

- BMS / Building Automation engineers
 - Facility operations teams
 - Industrial controls & instrumentation teams
 - Energy platform integrators needing a reliable acquisition layer
-

Feature 1 — Automatic Device Discovery

VayuRays scans the network and automatically discovers every compatible building or plant device — no manual point-by-point setup required to get started.

Key benefits

- Faster commissioning, less manual configuration
 - Nothing on the network gets overlooked
 - Works with industry-standard building automation protocols
-

Feature 2 — Operator-Controlled Point Selection

Once devices are discovered, operators choose exactly which data points matter — and configure how often (or under what conditions) each one is recorded.

Key benefits

- Full control over what data is collected and why
- Flexible recording: on a schedule, or only when a value actually changes
- Avoids data overload — capture signal, not noise

Device discovery and point configuration screen.

Feature 3 — Always-On, Unattended Collection

VayuRays runs continuously in the background as a system service — collecting data around the clock without requiring an operator to keep an application open or babysit the process.

Key benefits

- True 24/7 reliability, independent of user sessions
- Consistent, precisely-timed recording intervals
- Minimal IT overhead to keep running

Feature 4 — Live Communication Health Monitoring

The moment a device stops responding, VayuRays flags it visually — and automatically clears the flag the instant communication is restored. No silent data gaps go unnoticed.

Key benefits

- Immediate visibility into network/device issues
 - Self-clearing status means no manual reset needed
 - Confidence that "no data" is never mistaken for "no problem"
-

Feature 5 — Live History, Trends & Charting

Every monitored point has a live, auto-updating table and trend chart, so operators can watch current behavior and explore historical patterns side by side.

Key benefits

- Instant visual feedback on equipment behavior
- Date-range filtering for focused historical review
- No separate reporting tool required for a quick look-back

Live history table and trend chart with date-range filtering.

Feature 6 — One-Click Data Export

Any point's history, for any date range, can be exported instantly — ready to hand to an analyst, auditor, or another system.

Key benefits

- Removes friction from ad hoc reporting requests
- Supports compliance and audit documentation
- Clean, ready-to-use exported data

Feature 7 — Time-Zone-Aware Reporting

Readings are always captured on a single, consistent internal clock, then displayed and exported in whatever local time zone the site operates in — critical for multi-site organizations.

Key benefits

- Accurate, consistent data across multiple sites/regions

- No confusion when comparing timestamps across locations
- One configuration, correct everywhere

Feature 8 — Transparent System Activity Logging

A live, filterable activity log lets technical teams see exactly what the system is doing at any moment — supporting fast troubleshooting and operational confidence.

Key benefits

- Full transparency into day-to-day system operation
- Faster diagnosis when something needs attention
- Builds operator trust in an unattended system

Feature 9 — Modern, Crisp Desktop Experience

The configuration and monitoring application is built for today's high-resolution displays, staying sharp and readable on everything from a laptop to a large control-room monitor.

Key benefits

- Comfortable for extended monitoring sessions
- Professional appearance for control rooms and site visits
- Consistent experience across different hardware

VayuRays — Business Outcomes Summary

Outcome	How VayuRays Delivers
Reliable data foundation	Always-on, unattended, scheduled collection
Faster issue detection	Real-time communication health monitoring
Lower commissioning effort	Automatic device discovery
Audit-ready reporting	One-click, time-zone-correct CSV export
Multi-site consistency	Centralized storage, time-zone-aware display

Better Together: One Connected Energy Stack

Layer	Product	Role
Field data capture	VayuRays	Discovers devices, collects and safeguards every

		reading, 24/7
Intelligence & optimization	CognitiveEMS	Forecasts demand, optimizes source dispatch, manages cost, tariffs, banking & compliance

Suggested combined message:

"VayuRays gives you data you can trust. CognitiveEMS turns that trust into smarter, cheaper, greener energy decisions — automatically, every 15 minutes, every day."

Recommended narrative arc for a combined brochure:

1. The energy management challenge (fragmented data, reactive decisions, rising costs)
 2. The foundation — VayuRays captures the truth on the ground
 3. The intelligence — CognitiveEMS turns truth into action and savings
 4. Proof points — dashboards, forecasts, savings, compliance (screenshots)
 5. Call to action
-
